From Vision to Action

- Develop a dynamic action plan & update regularly
- Measure progress
- Change happens and you must stay flexible and relevant
- Ask this question often: Are the right people at the table?
- Share your successes with community and funders. Volunteers and partners value results

Training: 10 Things Parents Need to Know About Why We Immunize Kids

LSmith@tapi.org

1. Kids are at risk for disease.
2. Vaccine preventable diseases still exist.
3. When we immunize 95% of the population against a vaccine preventable disease, we can prevent an outbreak from happening.
4. Vaccine offer protection to us and our loved ones.
5. Vaccines are safe. Vaccines have been studied and given for years with very few minimal reactions.
6. Vaccine antibodies act as personal ninjas to protect from the actual disease.
7. Babies get their first vaccine from mom.
8. Doctors, nurses and scientists support vaccination.
9. Vaccines are required for childcare or kindergarten to protect kids and their classmates.
10. Kids need protection as they grow. Teens and young adults need vaccines too.

Advocacy

Take Action Arizona

Let Governor Ducey know we support vaccines & vaccine education.

Add your name to our growing list of support. [Find out more.](#)

Thank You!
